According to our (Global Info Research) latest study, the global Recycled Aluminum market size was valued at USD 107200 million in 2023 and is forecast to a readjusted size of USD 99550 million by 2030 with a CAGR of -1.1% during review period.

Aluminium recycling is the process by which scrap aluminium can be reused in products after its initial production. The process involves simply re-melting the metal, which is far less expensive and energy-intensive than creating new aluminium through the electrolysis of aluminium oxide (Al₂O₃), which must first be mined from bauxite ore and then refined using the Bayer process.

The world's leading players of recycled aluminum include Novelis, Norsk Hydro, UACJ, Constellium and Hebei Sitong New Metal Material. The top three global players by revenue account for nearly 23 per cent. Asia-pacific is the world's largest market with a market share of about 53 percent, followed by Europe and North America with about 19 percent and 17 percent, respectively. In terms of product type, aluminum flat rolled products is the largest market segment with a 45 percent share, and in terms of application, the construction industry has the largest share with about 28 percent.
