Abstracts

The global Recycled Chopped Carbon Fiber market size is expected to reach \$ 217 million by 2032, rising at a market growth of 21.0% CAGR during the forecast period (2026-2032).

Recycled Chopped Carbon Fiber is a short fiber reinforcement material produced from recycled carbon fiber feedstock, usually supplied as loose chopped fiber, bundled fiber, pellets, masterbatch or compound-ready material. It is different from virgin chopped carbon fiber mainly in feedstock origin rather than final morphology. The product is typically obtained from recycled carbon fiber recovered from carbon fiber production scrap, prepreg scrap, cured composite offcuts or end-of-life composite parts, and then converted into short fiber forms suitable for compounding, molding, reinforcement and functional modification. It retains many key properties of carbon fiber, including low density, high stiffness, electrical conductivity, dimensional stability and wear resistance, while offering better material circularity and cost adaptability.

The upstream raw materials of Recycled Chopped Carbon Fiber mainly include dry carbon fiber scrap, carbon fiber tow waste, fabric trimming waste, expired or off-spec prepreg, cured CFRP scrap, recycled carbon fiber from retired aerospace, automotive, wind power, sporting goods and industrial composite parts, as well as auxiliary materials such as sizing agents, dispersing additives and packaging materials. Its downstream applications are mainly concentrated in thermoplastic compounding, thermoset molding compounds, injection molded components, automotive lightweight parts, electronics and electrical components, conductive and antistatic plastics, 3D printing materials, friction materials, cementitious composites, industrial wear-resistant parts and selected functional composite materials.

In 2025, global sales of Recycled Chopped Carbon Fiber reached approximately 3,216 tons, with an average global market price of around US\$ 17/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 20% to 50%.

Recycled Chopped Carbon Fiber is an important product form that supports the transition of the carbon fiber industry toward circular utilization and more cost-effective applications. As carbon fiber is increasingly used in aerospace, automotive, wind power, sporting goods and industrial composites, production scrap, expired prepreg and end-of-life composite parts are becoming more relevant sources of recoverable high-value materials. Recycled chopped carbon fiber provides a practical way to bring these carbon fiber resources back into reinforcement and functional material systems, helping reduce material cost and the disposal burden of composite waste.

On the demand side, market growth is mainly driven by automotive lightweighting, functional electronics, expansion of thermoplastic composites, upgrading of conductive and antistatic materials, modification of 3D printing filaments, and functional demand from construction and friction materials. Compared with continuous carbon fiber and virgin chopped carbon fiber, recycled chopped carbon fiber is better suited to applications that value cost efficiency, sustainability and processing convenience, but do not require continuous fiber architecture. It is particularly suitable for injection molding, extrusion, compression molding, rubber mixing and filler modification systems, where it can provide a good balance of reinforcement, conductivity, wear resistance and dimensional stability.

However, broader adoption is still affected by feedstock dispersion, batch consistency, resin residue control, fiber length distribution, surface treatment compatibility and customer qualification cycles. Future competition will not be based only on recycling capacity, but on integrated capabilities in feedstock sourcing, sorting, chopping and grading, surface modification, formulation development and downstream qualification. Overall, Recycled Chopped Carbon Fiber has favorable growth potential and increasing industry attention, but its near-term scale-up is more likely to start from cost-sensitive reinforcement materials, conductive and antistatic compounds, functional fillers and selected non-critical structural parts.

This report studies the global Recycled Chopped Carbon Fiber demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Recycled

Chopped Carbon Fiber, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Recycled Chopped Carbon Fiber that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Recycled Chopped Carbon Fiber total market, 2021-2032, (USD Million)

Global Recycled Chopped Carbon Fiber total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Recycled Chopped Carbon Fiber total market, key domestic companies, and share, (USD Million)

Global Recycled Chopped Carbon Fiber revenue by player, revenue and market share 2021-2026, (USD Million)

Global Recycled Chopped Carbon Fiber total market by Type, CAGR, 2021-2032, (USD Million)

Global Recycled Chopped Carbon Fiber total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Recycled Chopped Carbon Fiber market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Phlex Tek, Procotex, Vartega, Toray, Mitsubishi Chemical, Hadeq Recycling, Carbon Fiber Recycling (CRF), Carbon Fiber Remanufacturing, Newtech Group, Nantong Fuyuan, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Recycled Chopped Carbon Fiber market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Key Questions Answered

1. How big is the global Recycled Chopped Carbon Fiber market?
2. What is the demand of the global Recycled Chopped Carbon Fiber market?
3. What is the year over year growth of the global Recycled Chopped Carbon Fiber market?
4. What is the total value of the global Recycled Chopped Carbon Fiber market?
5. Who are the Major Players in the global Recycled Chopped Carbon Fiber market?
6. What are the growth factors driving the market demand?
