Abstracts

According to our (Global Info Research) latest study, the global Recycled Plastic Tiles market size was valued at US\$ 160 million in 2025 and is forecast to a readjusted size of US\$ 280 million by 2032 with a CAGR of 8.3% during review period.

In 2025, global recycled plastic tile production reached approximately 31 m sqm, the average price is 5 usd/sqm. Compared with other tiles, recycled plastic tile has considerable durability and is safe for the environment, and will not emit harmful substances. It also does not interfere with radio waves, and television reception does not attract electricity.

Market Concentration and Key Players:

From an international perspective, the market concentration of renewable plastic bricks is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, Kuzabiashara and Shayna Eassigned and other large manufacturers; from the domestic point of view, renewable plastic bricks still have a lot of room for development.

Manufacturing Processes and Market Trends:

The core of the production process of renewable plastic bricks is to collect waste plastics after strict sorting and cleaning, melt them at high temperature and mix them with specific additives, and then mold them under high pressure. The whole production process realizes the resource utilization of waste, and every 10,000 standard bricks produced can consume about 2 tons of recycled plastics. Compared with traditional

building materials, this brick has excellent characteristics of light weight, high strength, waterproof, heat insulation and corrosion resistance.

Current market trends show that the demand for renewable plastic bricks has grown significantly, driven by both green building policies and circular economy goals. Its application fields are expanding from sidewalk paving, temporary facilities, etc. to more conventional building scenarios. In the future, the industry development will pay more attention to performance improvement and application scenario innovation, with a view to achieving greater breakthroughs in environmental protection and practical value.
