Abstracts

The global Recycled Resources market size is expected to reach \$ 77911 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

Recyclable resources refer to waste materials generated during social production and daily life that have lost their original use value but can regain their value after recycling and processing. It includes waste materials from industrial and domestic waste, such as scrap steel, waste plastics, and waste paper. Its core principle is to reduce the consumption of primary resources through recycling and achieve sustainable utilization. In China alone, the total amount of recycled resources from 11 categories—scrap steel, scrap non-ferrous metals, waste plastics, waste paper, waste tires, waste electrical and electronic products, scrapped motor vehicles, waste textiles, waste glass, waste batteries (excluding lead-acid batteries), and decommissioned wind and solar power equipment—was approximately 401 million tons, a year-on-year increase of 6.5%, with a total value of approximately 1.34 trillion yuan. The global recycled resources market exceeds \$600 billion.
