According to our (Global Info Research) latest study, the global Recycled Silicon Toothpaste market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Regenerated silicon toothpaste is a new type of toothpaste whose main ingredient is regenerated silicon. The main function of this toothpaste is to repair and protect teeth, and relieve problems such as oral ulcers and oral sensitivity.

The regenerated silicon component of regenerated silicon toothpaste has good biocompatibility and activity, and can combine with water in the oral cavity to form calcium silicate and other substances. These substances can block dentin tubules and relieve problems such as tooth sensitivity. At the same time, regenerated silicon can also promote remineralization of tooth surfaces, enhancing tooth hardness and anti-caries ability.
