Abstracts

The global Recycled Silicon Toothpaste market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The regenerated silicon component of regenerated silicon toothpaste has good biocompatibility and activity, and can combine with water in the oral cavity to form calcium silicate and other substances. These substances can block dentin tubules and relieve problems such as tooth sensitivity. At the same time, regenerated silicon can also promote remineralization of tooth surfaces, enhancing tooth hardness and anti-caries ability.

Regenerated silicon toothpaste is a new type of toothpaste whose main ingredient is regenerated silicon. The main function of this toothpaste is to repair and protect teeth, and relieve problems such as oral ulcers and oral sensitivity.
