In 2025, global red and blue light acne removal device production reached approximately 2.7 million units. The red and blue light acne device is a beauty and skincare instrument that uses specific wavelengths of red and blue light to treat the skin. The blue light primarily targets and eliminates Cutibacterium acnes, reducing inflammation and sebum production, while the red light promotes blood circulation and tissue repair, achieving effects such as anti-inflammation, oil control, accelerated acne healing, and improvement of acne marks. This device is generally easy to operate, non-invasive, and gentle, suitable for home skincare or professional treatments in beauty salons. It is appropriate for mild to moderate acne as well as post-acne skin repair. With growing consumer demand for safety, convenience, and multifunctional care, the red and blue light acne device market has shown stable growth.

In recent years, the red and blue light acne device market has maintained steady growth, driven by increased consumer awareness of skincare, rising demand for problem-skin management, and the widespread adoption of home beauty devices. These devices are widely used in beauty salons, skin care centers, and home care settings, primarily for anti-inflammatory treatment of mild to moderate acne, oil control, and improvement of acne marks. With ongoing technological upgrades, red and blue light acne devices are evolving toward multi-mode light therapy, intelligent adjustment, portability, and integrated care functions to meet the needs of different skin types and

usage scenarios. At the same time, consumers' attention to safety, ease of use, and treatment effectiveness is driving the market toward high-quality, highly reliable devices. Looking ahead, the red and blue light acne device market is expected to continue its stable expansion.
