Reduced fat dairy products are prepared by the centrifugal process which separates fat from the milk. The centrifugal process can also remove bacteria and other harmful elements from milk. The rising dominance of diseases such as obesity due to the consumption of high-fat milk is surging the demand for reduced fat dairy products market. The medical experts recommend the consumption of reduced fat dairy products during pregnancy as it provides calcium, vitamins, and minerals that are important for the health of both mother and baby. With a growing focus on health and wellness, consumers are more inclined to choose lower fat dairy options as part of their balanced diet. Reduced fat dairy products provide a means

for consumers to satisfy their cravings for dairy while making healthier choices. Additionally, government initiatives and health organizations worldwide have been promoting healthy eating habits, including the consumption of low-fat foods. This has further fueled the demand for reduced fat dairy products as consumers become increasingly conscious of their dietary choices.
