The global Reducer Coupling market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The reducer coupling is a mechanical component used to connect the reducer and the transmission shaft, usually used to transmit high torque and low-speed rotation torque. The reducer coupling is usually composed of two shaft sleeves, a set of coupling claws and several fixing screws. Its function is to connect the output shaft of the reducer with the transmission shaft, while allowing a certain degree of axial displacement and angular deviation , to reduce the vibration and noise of the transmission system.
