Abstracts

According to our (Global Info Research) latest study, the global Reducer Housing market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The reducer housing is the basic part of the reducer, and also the base for all parts of the reducer. The shape of the housing, the accuracy of sand setting and the accuracy of the mutual cooperation of each longitudinal M axis determine the working performance of the entire reducer. When the car is running, the reducer bears a large radial force and axial force, and the increased torque is transmitted to the driving wheels through the differential and the half shaft. The alternating load formed by various forces and moments Both act on the reducer housing through shafts and bearings. Therefore, it can be said that the function of the reducer housing is to organize the transmission parts of the reducer and make the differential work.
