According to our (Global Info Research) latest study, the global Reed Relay market size was valued at USD 233.2 million in 2023 and is forecast to a readjusted size of USD 297.5 million by 2030 with a CAGR of 3.5% during review period.

A reed relay is a type of relay that uses an electromagnet to control one or more reed switches. The contacts are of magnetic material and the electromagnet acts directly on them without requiring an armature to move them. Sealed in a long, narrow glass tube, the contacts are protected from corrosion. The glass envelope may contain multiple reed switches or multiple reed switches can be inserted into a single bobbin and actuate simultaneously. Reed switches have been manufactured since the 1930s.

Compared with armature-based relays, reed relays can switch much faster, as the moving parts are small and lightweight, although switch bounce is still present. Also, they require less operating power and have lower contact capacitance. Their current handling capacity is limited but, with appropriate contact materials, they are suitable for 'dry' switching applications. They are mechanically simple, making for reliability and long life.

Global Reed Relay key players include Standex Electronics, Littelfuse, Coto Technology, Pickering Electronics, Sanyu Switch, etc. Global top five manufacturers hold a share about 50%. Asia-Pacific is the largest market, with a share about 49%, followed by Europe and North America, both have a share about 40 percent.
