The global Reed Relays for Electric Vehicles market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Reed relay is an electronic relay that uses reed as a contact. Reed relays consist of one or more springs, typically made of nickel iron alloy. When the coil of the relay is energized, the reed will attract and close the contacts, thus completing the circuit connection. When the coil is powered off, the spring will spring open and open the contacts, breaking the circuit.
