According to our (Global Info Research) latest study, the global Reed Sensors market size was valued at USD 1975.9 million in 2023 and is forecast to a readjusted size of USD 2784.8 million by 2030 with a CAGR of 5.0% during review period.

A reed sensor is a hermetically sealed electromagnetic sensor operated by an applied magnetic field generated by either a permanent magnet or current-carrying coil. Reed sensors are used for sensing and detecting movement, proximity, metal detection, and liquid level and flow measurement. It consists of 2 or more metal reed contacts (blades) that are hermetically sealed inside a glass capsule containing inert gas to prevent the activation of contacts. The contacts can be normally open, which closes in the presence of magnetic field, and normally closed, which opens when a magnetic field is applied.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Reed Sensors. Europe also plays important roles in global market, with market size of 39 million USD in 2017 and has a market share about 14.5%.
