According to our (Global Info Research) latest study, the global Reel to Reel Screen Printing Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

With the rapid development of screen printing technology and the increase in labor costs. Roll to roll screen printing machines are increasingly popular among customers. The characteristics of roll to roll screen printing machines are soft layout, thick ink layer, strong coverage, and the advantage is that they are not limited by the size and shape of the substrate. They are applied to PVC, PET, PP, PC, PE, BOPP, etc. The characteristics of screen printing can be summarized in the following aspects: screen printing can use various types of ink. That is, various types of inks such as oily, water-based, synthetic resin emulsion type, powder, etc; The layout is soft. The screen printing layout is soft and has a certain degree of elasticity, which is not only suitable for printing on soft materials such as paper, fabric, and various thin films, but also suitable for printing on hard materials such as glass, ceramics, etc; Screen printing has low imprinting force. Due to the low pressure used during printing, it is also suitable for printing on fragile shopping materials; Thick ink layer with strong coverage; Not limited by the surface shape and size of the substrate.
