Abstracts

The global Reel to Reel Screen Printing Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

With the rapid development of screen printing technology and the increase in labor costs. Roll to roll screen printing machines are increasingly popular among customers. The characteristics of roll to roll screen printing machines are soft layout, thick ink layer, strong coverage, and the advantage is that they are not limited by the size and shape of the substrate. They are applied to PVC, PET, PP, PC, PE, BOPP, etc. The characteristics of screen printing can be summarized in the following aspects: screen printing can use various types of ink. That is, various types of inks such as oily, water-based, synthetic resin emulsion type, powder, etc; The layout is soft. The screen printing layout is soft and has a certain degree of elasticity, which is not only suitable for printing on soft materials such as paper, fabric, and various thin films, but also suitable for printing on hard materials such as glass, ceramics, etc; Screen printing has low imprinting force. Due to the low pressure used during printing, it is also suitable for printing on fragile shopping materials; Thick ink layer with strong coverage; Not limited by the surface shape and size of the substrate.
