According to our (Global Info Research) latest study, the global Reference Thermometers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Reference Thermometers are very high accuracy temperature sensors often with included hand-held readout instruments.

A Reference Thermometer can be used for a comparison calibration, where the reference thermometer and the temperature sensor to be tested are both placed in a stable heat source such as a water bath. The tested temperature sensors readings can be checked against the reference thermometers readings to determine how accurate the temperature sensor is.
