Refined edible oil is a kind of edible oil that has processed crude oil (crude oil) to remove the original impurities and possible harmful substances. Alkali refining is generally used, that is, adding alkali to remove free acid, reduce acidity, and act on harmful substances (such as aflatoxin) to dissolve in water; then wash with water to decolorize, deodorize, and remove impurities and harmful substances. After the oil is refined, the color becomes lighter and the oil body is clear, which is used for cooking and processing food or direct consumption.
