## Abstracts

According to our (Global Info Research) latest study, the global Refined Paraffin Wax market size was valued at US\$ 21405 million in 2025 and is forecast to a readjusted size of US\$ 27831 million by 2032 with a CAGR of 3.8% during review period.

Refined Paraffin Wax is a highly purified, white, odorless, and chemically stable hydrocarbon wax derived from petroleum, composed mainly of linear saturated alkanes (typically C<sub>20</sub>?C<sub>40</sub>), obtained by removing oil, color bodies, and impurities from slack wax produced during crude oil refining. Its supply chain begins upstream with crude oil extraction, followed by atmospheric and vacuum distillation in refineries to produce lubricating oil fractions; these fractions undergo solvent dewaxing to yield slack wax, which is then further processed through deoiling, hydrotreating, and clay or catalytic refining to produce fully refined paraffin wax with high purity and controlled melting points. Midstream, manufacturers standardize grades (e.g., fully refined, semi-refined, and microcrystalline blends), and convert the wax into slabs, pellets, or emulsions. Downstream, refined paraffin wax is distributed to a wide range of industries including candles, packaging (wax-coated paper and corrugated boards), rubber and tire processing, adhesives, cosmetics, pharmaceuticals, hot-melt formulations, and electrical insulation, with global supply dominated by integrated oil majors and specialty wax producers, and pricing influenced by crude oil dynamics, refinery configurations, and regional supply-demand balances. In 2025, global Refined Paraffin Wax output was about 24 million tons with 35 million tons of capacity, average prices of USD 800?1,400 per ton, and gross margins around 17%.
