Refinery distillation tower is a tower type gas-liquid contact device for distilling crude oil

According to our (Global Info Research) latest study, the global Refinery Distillation Column market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main function of the distillation column is to distill raw fuel, separate the heavier and lighter components, the liquid raw fuel is heated by the heating furnace on the way into the distillation column, the lighter components will evaporate, the steam will rise to the top of the column, and then discharged by the pipe. It is sent out, and the steam is liquefied by a condenser and then pumped away to improve the efficiency of the gasoline. At this time, the heavier residue left in the bottom of the tower is extracted, and these components are used to make products such as asphalt.
