According to our (Global Info Research) latest study, the global Reflective Logical Output Optical Sensor market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Products in the Logical Output Reflective Optical Sensor family consist of light emitters and photosensitive elements (usually phototransistors) that are adjacent to each other and mounted in the same direction to ensure that the light emitted by the transmitter can be detected by the sensor elements in the device when it is reflected by an object in the sensor field of view. This type of logical output sensor generates a binary (bimodal) signal based on whether the optical signal received by the photoelectric sensor exceeds a specified threshold.
