## Abstracts

According to our (Global Info Research) latest study, the global Refractories for AOD Vessels market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Refractories for AOD (Argon Oxygen Decarburization) vessels are specialized materials designed to withstand the harsh conditions encountered during the stainless steel production process. AOD vessels are used for refining stainless steel, particularly to reduce the carbon content and adjust the alloy composition. Refractories used in AOD vessels must be able to withstand high temperatures, chemical corrosion from molten metal and slag, and mechanical stress. These refractories are strategically chosen and placed within the AOD vessel to provide optimal protection against the extreme conditions encountered during stainless steel refining. The selection of refractories depends on factors such as operating temperatures, slag chemistry, mechanical stress, and the specific requirements of the AOD vessel design.
