According to our (Global Info Research) latest study, the global Refrigerant Dehumidifiers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

These work by condensing moisture out of the air. Damp air from within the building is drawn into the dehumidifier and passed over a cold evaporator coil which cools the air below its dewpoint temperature. This results in condensation that can be collected from the cold coils. This water is collected in a pan and either removed manually or some dehumidifiers have a hose through which the water is automatically purged.
