Abstracts

The global Refrigerant Gas Leakage Monitoring Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Refrigerant gas leakage monitoring sensor is a device specially designed to detect gas leakage in refrigeration systems. It uses advanced sensor technology and signal processing technology, which can monitor the human body concentration in the system in real time. Once a human body leak is found, the sensor will send out an alarm message to remind the operator to deal with it in time to avoid possible safety incidents and environmental pollution. The sensor has the characteristics of high sensitivity, high reliability, good safety, convenient use, and simple maintenance. It is widely used in refrigeration equipment, air-conditioning equipment, cold storage and other industries.
