## Abstracts

Refrigerant grade isobutane, as an organic compound, its chemical formula is  $C_4H_{10}$ , which appears as a colorless flammable gas at normal temperature and pressure. Due to its low boiling point, it is often used as a refrigerant, especially in small refrigeration systems.

According to our (Global Info Research) latest study, the global Refrigerant Grade IsoButane market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

As global environmental awareness increases, the demand for low-volatile organic solvents is gradually increasing. As a low-volatility solvent, isobutane shows good environmental performance in replacing high-volatile organic solvents, so its market demand is expected to continue to grow.
