The global Refrigerated Compartment market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The body of the refrigerated truck is different from the ordinary van, it needs to have good sealing performance and thermal insulation effect, so as to ensure that the refrigerated goods are in a stable temperature environment. The design of the refrigerated compartment is mainly about airtight performance and thermal insulation performance. Usually, the structure of the refrigerated truck adopts a three-layer structure, and the inner and outer skins are made of composite materials, such as glass steel plate, color steel plate, aluminum alloy and other materials. The material of the inner plate should be different for the goods to be transported, and the most expensive inner plate should be stainless steel.

This report studies the global Refrigerated Compartment production, demand, key manufacturers, and key regions.
