According to our (Global Info Research) latest study, the global Refrigerated Gas Carriers market size was valued at USD 672.9 million in 2022 and is forecast to a readjusted size of USD 904 million by 2029 with a CAGR of 4.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Refrigerated Gas Carriers have good prospects for future development.

Refrigerated Gas Carriers are designed to transport cargo at approximately atmospheric pressure and are generally designed to transport large quantities of liquefied petroleum gas and ammonia. Refrigerated Gas Carriers can be divided into semi-refrigerated gas carriers and fully refrigerated gas carriers according to the degree of freezing. Semi-refrigerated gas carriers are increasingly becoming the best way to transport a wide range of gases, from LPG and VCM to propylene and butadiene. Semi-refrigerated gas carriers are most popular among operators of 'small' gas carriers.

The most widely used arrangement for fully refrigerated gas carriers is an independent tank with a single side hull. A fully refrigerated gas carrier requires a complete secondary barrier and the cargo hold space must be inerted when carrying flammable cargo.

This report is a detailed and comprehensive analysis for global Refrigerated Gas Carriers market.
