Abstracts

The global Refrigerated Gas Carriers market size is expected to reach \$ 904 million by 2029, rising at a market growth of 4.3% CAGR during the forecast period (2023-2029).

Refrigerated Gas Carriers have good prospects for future development.

Refrigerated Gas Carriers are designed to transport cargo at approximately atmospheric pressure and are generally designed to transport large quantities of liquefied petroleum gas and ammonia. Refrigerated Gas Carriers can be divided into semi-refrigerated gas carriers and fully refrigerated gas carriers according to the degree of freezing. Semi-refrigerated gas carriers are increasingly becoming the best way to transport a wide range of gases, from LPG and VCM to propylene and butadiene. Semi-refrigerated gas carriers are most popular among operators of 'small' gas carriers.

The most widely used arrangement for fully refrigerated gas carriers is an independent tank with a single side hull. A fully refrigerated gas carrier requires a complete secondary barrier and the cargo hold space must be inerted when carrying flammable cargo.

This report studies the global Refrigerated Gas Carriers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Refrigerated Gas Carriers, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
