## Abstracts

According to our (Global Info Research) latest study, the global Refrigeration Equipment Rental market size was valued at US\$ 8403 million in 2025 and is forecast to a readjusted size of US\$ 13451 million by 2032 with a CAGR of 7.0% during review period.

Refrigeration equipment leasing refers to businesses or organizations acquiring various refrigeration and cold chain-related equipment through leasing to meet temperature control needs in production, processing, warehousing, logistics, commercial operations, or temporary projects, without incurring significant costs for equipment procurement and long-term maintenance. This service is typically provided by professional equipment leasing companies or integrated engineering service providers, encompassing integrated services such as equipment selection, transportation and installation, operation and maintenance, energy efficiency management, and emergency response. It is widely used in food cold chain, pharmaceutical storage, chemical production, data center cooling, and temporary cooling for large events, essentially falling under the category of 'on-demand temperature control infrastructure services.'

The refrigeration equipment leasing industry is in a steady upward cycle. Its growth is primarily driven by the explosive growth in global cold chain logistics demand, the increased temporary refrigeration demand due to frequent extreme weather events, and the trend of enterprises reducing capital expenditure and improving operational flexibility. At the same time, stricter environmental regulations and energy efficiency requirements are making enterprises more inclined to acquire the latest equipment through leasing to avoid the risk of technological obsolescence. In addition, the rapid development of modular cold chain, mobile cold storage, and emergency refrigeration

solutions is driving the industry to upgrade from traditional equipment leasing to 'cold chain solution services.' In the future, it has room for continued expansion in emerging markets and high-end cold chain sectors, but it also faces challenges in terms of heavy asset investment in equipment and utilization management.
