Refrigeration and heating dynamic temperature control system is heated by heat transfer oil, which is circulated to the jacket layer of the reactor through a circulating pump. A periodic cycle is carried out in the pipeline aCooling and the jacket. The temperature is automatically controlled to quickly reach the temperature required by the product process. The intelligent PID control technology is adopted, which can heat to a constant temperature or cool down. The temperature control range is large, the temperature is accurate, uniform and stable, the heat transfer speed is fast, the temperature rise and fall speed is fast, and the temperature is automatically controlled, which can quickly meet the temperature requirements of various products.
