Abstracts

Refrigeration oil is the one that easily mixes with refrigerant and flows throughout the system while the refrigeration cycle is on. It doesn't freeze at lowest operating temperatures maintained in the specific system. It's freezing temperature is always 5 times lower than that of the system temperature at which it's operating. It's compatible with refrigerant properties. It's flash point should be high. It's non flammable and its viscosity should be in such a way that it enables in lubrication of all the mechanical components within the compressor.

Scope of the Report:

This report focuses on the Refrigeration Oil in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. APAC is estimated to be the largest refrigeration oil market in 2018 in terms of both, value and volume. It is also estimated to witness the highest growth during the forecast period. This growth can be attributed to the rise in the manufacturing of consumer appliances and automobiles in the region. Furthermore, the changing lifestyle of consumers and their rising income levels have led to a higher demand for refrigerators, freezers, and air conditioners, which, in turn, drives the refrigeration oil market. The growing demand for perishable food products along with growth in the pharmaceutical industry also drives the demand for refrigerators and freezers, further fueling the growth of the refrigeration oil market in the region.

The worldwide market for Refrigeration Oil is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in
