Abstracts

The global Refurbished HDD market size is expected to reach \$ 3557 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

Refurbished HDD market refers to hard disk drives that have been previously deployed in enterprise or data center environments and are subsequently recovered, tested, data-sanitized, repaired if necessary, and resold for secondary use. These products are widely used in cost-sensitive storage scenarios such as backup, cold storage, surveillance, and SME IT systems. The market forms a key part of the broader IT Asset Disposition (ITAD) ecosystem, effectively extending the lifecycle of storage hardware and enabling a circular economy model in data infrastructure.

From a market sizing perspective, global refurbished HDD shipments are estimated at 276.28 EB in 2025, with an average price of around US\$9.15 per TB. This implies a market structure heavily skewed toward high-capacity enterprise drives, where value is driven more by volume throughput than by unit pricing. Compared with new HDDs, refurbished drives typically trade at a significant discount—often 40–70% lower—making them highly attractive for large-scale storage deployments where performance is less critical than cost efficiency.

In terms of profitability, the refurbished HDD market generally exhibits moderate-to-high gross margins, typically ranging from 20% to 40%, depending on sourcing efficiency, grading capability, and channel positioning. ITAD providers and specialized refurbishers that control upstream supply—particularly from hyperscale data centers—tend to achieve higher margins due to lower acquisition costs and better asset selection.
