Abstracts

According to our (Global Info Research) latest study, the global Regenerative Blower market size was valued at US\$ 537 million in 2025 and is forecast to a readjusted size of US\$ 789 million by 2032 with a CAGR of 5.4% during review period.

A regenerative blower, also called a side channel blower or ring blower, is an air-moving device used to generate low-pressure compressed air or vacuum. It uses a contact-free rotating impeller to transfer kinetic energy to air or gas repeatedly inside a side channel, creating continuous, oil-free, low-pulsation airflow. Regenerative blowers are compact, relatively quiet, low-maintenance, and suitable for clean air applications. They are widely used in wastewater treatment, pneumatic conveying, vacuum lifting, packaging, printing, drying, aquaculture, medical suction, food processing, plastics processing, electronics manufacturing, and general industrial automation systems.

Global production capacity is approximately 800 thousand units.

In 2025, global sales reached approximately 698 thousand units, with an average price of around US\$ 748 per unit, gross margin around 25%.

The regenerative blower market has a stable growth outlook because the product is widely used for clean, continuous pressure and vacuum supply in industrial systems. Demand will remain supported by wastewater treatment, pneumatic conveying, packaging, printing, food processing, medical equipment, aquaculture, drying, plastics processing, and industrial automation. The market is mature, but replacement demand and efficiency upgrades remain important. Future competition will focus on energy efficiency, noise reduction, compact structure, oil-free operation, reliability, variable-

speed control, smart monitoring, and lower lifecycle cost. Overall, regenerative blowers will continue to grow steadily in general industrial applications.

Market Trend

The market is moving toward energy-saving motors, variable-frequency drive control, low-noise design, compact aluminum housings, improved thermal management, and longer service life. Manufacturers are expanding single-stage, double-stage, and multistage models to meet different airflow, pressure, and vacuum requirements. Demand is also increasing for IP-rated motors, ATEX explosion-proof versions, integrated silencers, filters, relief valves, and digital monitoring functions. In many industrial processes, users are replacing older blowers with quieter, more efficient, and better-controlled equipment. Oil-free operation and low maintenance remain important trends for clean manufacturing and automated production lines.

Market Drive

Market growth is mainly driven by the need for reliable, oil-free, and pulse-free airflow in industrial processes. Wastewater treatment plants use regenerative blowers for aeration and backwashing; pneumatic conveying systems require stable air supply for powders and granular materials; packaging and printing equipment use vacuum for holding, lifting, sheet separation, and material handling; and food, medical, electronics, and plastics industries require clean air without oil contamination. Their simple structure, compact size, low vibration, and relatively low maintenance cost make them attractive for OEM equipment builders and end users. Growth in automation and environmental treatment continues to support demand.

Upstream and Downstream

Upstream suppliers mainly include electric motor manufacturers, aluminum casting suppliers, impeller and housing producers, bearing suppliers, seal manufacturers, precision machining companies, frequency inverter suppliers, silencers, filters, sensors, pressure relief valve suppliers, electronic control component suppliers, and testing equipment providers. Regenerative blower manufacturers integrate these components into pressure and vacuum blower products. Downstream customers include wastewater treatment plants, packaging machinery companies, printing equipment manufacturers, pneumatic conveying system integrators, food processing companies, medical equipment manufacturers, aquaculture farms, drying system suppliers, plastics processing companies, electronics manufacturers, chemical companies, and general

industrial automation users.
