Abstracts

The global Rehabilitation Robotics market size is expected to reach \$ 525 million by 2032, rising at a market growth of 12.3% CAGR during the forecast period (2026-2032).

Rehabilitation Robotics is a field of research dedicated to understanding and augmenting rehabilitation through the application of robotic devices. Rehabilitation robotics includes development of robotic devices tailored for assisting different sensorimotor functions (e.g. arm, hand, leg, ankle), development of different schemes of assisting therapeutic training, and assessment of sensorimotor performance (ability to move) of patient; here, robots are used mainly as therapy aids instead of assistive devices. Rehabilitation using robotics is generally well tolerated by patients, and has been found to be an effective adjunct to therapy in individuals suffering from motor impairments, especially due to stroke.

The technical barriers of Rehabilitation Robotics are relatively high, resulting in high level concentration degree. The key companies in Rehabilitation Robotics market are AlterG, Hocoma and Ekso Bionics, etc. The enterprises are concentrated in USA and Europe. USA is the largest production and sales country, occupied about 30% of global sales market.

This report studies the global Rehabilitation Robotics production, demand, key manufacturers, and key regions.
