According to our (Global Info Research) latest study, the global Rehabilitation Robotics market size was valued at US\$ 211 million in 2024 and is forecast to a readjusted size of USD 471 million by 2031 with a CAGR of 12.3% during review period.

Rehabilitation Robotics is a field of research dedicated to understanding and augmenting rehabilitation through the application of robotic devices. Rehabilitation robotics includes development of robotic devices tailored for assisting different sensorimotor functions (e.g. arm, hand, leg, ankle), development of different schemes of assisting therapeutic training, and assessment of sensorimotor performance (ability to move) of patient; here, robots are used mainly as therapy aids instead of assistive devices. Rehabilitation using robotics is generally well tolerated by patients, and has been found to be an effective adjunct to therapy in individuals suffering from motor impairments, especially due to stroke.

The technical barriers of Rehabilitation Robotics are relatively high, resulting in high level concentration degree. The key companies in Rehabilitation Robotics market are AlterG, Hocoma and Ekso Bionics, etc. The enterprises are concentrated in USA and Europe. USA is the largest production and sales country, occupied about 30% of global sales market.
