The global Rehabilitation Traction Bed market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Rehabilitation traction bed is a kind of medical equipment, which is mainly used for the treatment of fractures, dislocations, soft tissue injuries, nerve root compression and other diseases or injuries in the cervical spine, lumbar spine and limbs. The device realizes the traction treatment for patients by adjusting parameters such as the height, inclination and traction force of the bed surface.

The rehabilitation traction bed is generally composed of a bed body, a traction mechanism, a control system, and a support system. Patients can lie on the rehabilitation traction bed, and achieve different therapeutic effects by adjusting the inclination angle of the bed surface and the magnitude of the traction force. The rehabilitation traction bed can be adjusted and configured according to different traction parts and treatment needs, and can realize a variety of different traction methods, such as neck traction, waist traction, limb traction, etc.
