A reinforcing bar (rebar) bender is a tool used in construction to bend steel bars or rods into specific shapes or angles. Rebar benders are commonly used in concrete construction to create reinforced concrete structures such as beams, columns, and foundations. The tool typically consists of a long handle with a bending head that can be adjusted to bend rebar to the desired angle. Rebar benders come in various sizes and capacities to accommodate different sizes of rebar and bending requirements. They are essential for ensuring that rebar is bent accurately and efficiently to meet the structural requirements of a project.
