The global Reishi Mushroom Mycelium Powder market size is expected to reach \$ 323 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Reishi mushroom mycelium powder is a natural fungal product obtained through liquid deep fermentation technology, where *Ganoderma lucidum* mycelium is cultivated on a large scale in aseptic fermentation tanks, and then harvested, dried, and pulverized. Its core function is to provide a full spectrum of biomass nutrition rich in β -glucan, triterpenes, proteins, and trace elements. It solves the problems of long growth cycles, susceptibility to contamination, and unstable active ingredients in traditional *Ganoderma lucidum* fruiting bodies, providing the health supplement, functional food, and cosmetic industries with standardized *Ganoderma lucidum* raw materials that offer stable year-round supply, uniform quality, traceability, and cost control. The upstream supply chain covers the selection and preservation of fungal strains, the production of culture media (such as organic carbon and nitrogen sources) required for aseptic fermentation tank cultivation, and the precise control and monitoring of the fermentation process. The downstream supply chain directly serves health supplement manufacturers (producing immune-modulating products), functional food companies (developing solid beverages and nutritional powders), and cosmetic companies (producing antioxidant skincare products), with products ultimately reaching end consumers through brand owners' distribution channels. In 2025, the production of reishi mushroom mycelium powder is expected to be approximately 4,500 tons, with an average price of approximately US\$50 per kilogram, a gross profit margin of approximately 40%, and a single production line capacity of approximately 100 tons per year.
