According to our (Global Info Research) latest study, the global Relational In-Memory Database market size was valued at USD 3214.4 million in 2023 and is forecast to a readjusted size of USD 10530 million by 2030 with a CAGR of 18.5% during review period.

An Relational in-memory database (IMDB) is a database management system that primarily depends on main memory for storing computer data. IMDBs are quicker than disk-optimized databases because they carry out fewer CPU instructions, and their internal optimization algorithms are much simpler. IMDB eradicates disk access by saving and manipulating data in the main memory. An IMDB commonly includes direct data manipulation and a dedicated memory-based architecture.
