The remote controllable air particle counter is an instrument that can be remotely monitored and controlled through the Internet. It is mainly used for real-time monitoring of tiny particles in the air such as indoors and workshops. It can automatically analyze multiple indicators such as particle quality, quantity, and size during the detection process, and upload the monitoring data to the cloud in digital form to realize remote data management and monitoring. The remote controllable air particle counter is mainly composed of particle collection module, sensor module, data processing module and remote communication module. Its workflow includes multiple links such as particle collection, sample processing, sensor detection, data processing, and cloud upload. The remote controllable air particle counter can realize remote monitoring and control, and the data transmission is fast and accurate. At the same time, it can monitor the air quality in multiple places at the same time, which greatly improves the efficiency and accuracy.
