Abstracts

The Remote Electronic Unit (REU) is a mono-block device. They are distributed electronics that are located close to or are attached on the actuator to provide local control of the actuator. The REU receives commands and processes the incoming and outgoing signals for the functions necessary to control the actuators. It is a part of Digital Voice Control System. The remote electronic unit receives the commands from the Audio Control Units (ACU) and correspondingly influences and processes all the incoming as well as outgoing audio signals. It performs the logical functions which is necessary for keying the transceivers and for aircraft intercommunication. It also provides generation of ten different aural alert signals which can be activated through discrete control lines. Remote electronics unit products are used in the most advanced fly-by-wire systems which provides precise closed-loop actuation control. It also acts as a critical interfaces between dozens of aircraft systems on modern aircraft platforms. A remote electronic unit controls power subsystems, such as thermal control, satellite attitude along with orbit control subsystems in a spacecraft. Such units manages the aircraft's flight control surface actuators and then interfaces with the integrated flight control electronics. The ability to support operation outside of a controlled environment makes placement of the REUs on spacecraft far more flexible than existing solutions. REU provides a high integrity command as well as control system interfacing to various feedback position sensors. A remote electronic unit in a cockpit locker controls the engines and bow thruster for stern-to docking.

SCOPE OF THE REPORT:

This report focuses on the Remote Electronic Unit in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report

categorizes the market based on manufacturers, regions, type and application. The original equipment manufacturer segment is estimated to lead the remote electronic unit market in 2018. Original Equipment Manufacturers (OEMs) are responsible for the installation of REU components, as line fitting these components is less time consuming as compared to the installation time post the delivery of an aircraft.

The North American region is estimated to lead the remote electronic unit market in 2018, due to the presence of several leading manufacturers, including Parker Hannifin, Rockwell Collins, and Curtiss-Wright.

The worldwide market for Remote Electronic Unit is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
