Abstracts

According to our (Global Info Research) latest study, the global Remote Jet Air Handling Unit market size was valued at US\$ 329 million in 2025 and is forecast to a readjusted size of US\$ 448 million by 2032 with a CAGR of 4.5% during review period.

In 2025, global remote jet air handling unit production reached approximately 363 k units, the average price is 880 usd/unit. The remote jet air handling unit is an integrated air conditioning terminal device designed specifically for high-ceilinged spaces. It consists of a housing, primary/medium-efficiency filters, a surface cooler, a high static pressure centrifugal fan, a condensate pan, and adjustable spherical jet nozzles. After heat and humidity treatment, the air is ejected at high speed by the high static pressure fan through a specially designed nozzle. Utilizing the jet's entrainment/entrainment effect, it achieves long-distance air delivery without ductwork, thereby eliminating temperature stratification and dead air zones in high-ceilinged spaces.

The gross profit margin of remote jet air handling unit is around 28%.
