RMM software (remote monitoring and management software) is a type of application that information technology (IT) service providers use to maintain their clients' IT infrastructure and systems. Remote Monitoring (also shortened to RMON) refers to the specification that helps MSPs monitor the network operational activities of their clients by using remote devices, which are known as probes or monitors. This helps MSPs ensure efficient network infrastructure control and management. Remote Management is managing a computer or a network from a remote location. It involves installing software and managing all activities on the systems/network, workstations, servers, or endpoints of a client, from a remote location.
