According to our (Global Info Research) latest study, the global Remote Patient Monitoring (RPM) Software market size was valued at US\$ 340 million in 2025 and is forecast to a readjusted size of US\$ 570 million by 2032 with a CAGR of 7.7% during review period.

Remote Patient Monitoring (RPM) software is a technology solution that enables healthcare providers to monitor patients' health and medical conditions remotely. It allows for the collection, analysis, and sharing of health data from patients outside of traditional clinical settings, which can improve patient outcomes, enhance efficiency, and reduce healthcare costs.

The current state of the remote patient monitoring (RPM) software market is as follows: With the rapid development of digital healthcare technology, the RPM software market is showing significant growth. On the one hand, market demand is strong, with increasing needs for remote monitoring in areas such as chronic disease management, elderly care, and postoperative rehabilitation. Patients are increasingly accepting convenient and personalized health monitoring services. On the other hand, technological integration is accelerating, with RPM software deeply integrated with artificial intelligence, the Internet of Things, and wearable devices, enabling real-time data collection, analysis, and early warning functions. Simultaneously, policy support and expanded medical insurance reimbursement coverage are also driving market development, with more and more medical institutions and companies entering this field, promoting product innovation and service upgrades. However, data security, privacy protection, and clinical validation remain challenges for the market. In the future, a balance needs to be struck between technological optimization and compliant

operation to further unleash market potential.
