The global Remote Video Support Software market size is expected to reach \$ 1052 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Remote video support software is a type of application tool that helps businesses and individuals achieve remote audio and video communication, collaboration, and technical support via the internet. It typically integrates functions such as video calling, screen sharing, remote control, collaborative whiteboards, real-time captioning, file transfer, and chat, aiming to establish a high-quality, low-latency communication and collaboration environment between users in different geographical locations. Common scenarios include remote technical support, remote customer service and after-sales support, distributed team collaboration, remote training and demonstrations, and remote diagnostics and collaborative checks.

The remote video support software market is expanding rapidly, driven by factors such as the normalization of remote work, the need for distributed team collaboration, and the emphasis on high-quality video communication. Vendors are providing cross-platform, low-latency, and stable connectivity solutions by integrating features such as multi-party video calling, screen sharing, collaborative whiteboards, real-time captioning, and end-to-end encryption. They emphasize the flexibility and scalability of cloud and on-premises deployments, as well as seamless integration with enterprise workflows (CRM, collaboration platforms, IT operations, etc.). Market competition focuses on video quality and stability, security and compliance, ease of use, cross-regional network adaptation, and the ability to support and manage large-scale meetings.
