According to our (Global Info Research) latest study, the global Removable Invisible Denture market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Removable invisible dentures are oral prostheses that can be removed and put on by yourself. It uses the mucosa and bone tissue covered by the remaining natural teeth and the denture base as support, and is fixed on the natural teeth through the denture fixture to restore the anatomical morphology and physiological function of the missing teeth and the surrounding defective tissues. Removable invisible dentures are made of elastic polymer resin materials, which have good translucency and simulation, and the color is close to the natural gum tissue, so they have good aesthetics in the mouth. The clasp part is also made of resin material, avoiding the unsightly problem of metal clasps in traditional removable dentures. Due to the use of elastic resin materials, removable invisible dentures have good elasticity and flexibility in the mouth, and the mouth feels more comfortable when worn, reducing the foreign body sensation that traditional dentures may bring. Removable invisible dentures can be removed and put on by yourself, so it is convenient for daily cleaning and oral hygiene maintenance. Take off the dentures after each meal for cleaning and soak them in cold water to effectively prevent bacterial growth and denture aging.
