According to our latest research, the global Renewable Energy EPC market size will reach USD 11010 million in 2031, growing at a CAGR of 7.6% over the analysis period.

Renewable Energy EPC (Engineering, Procurement, Construction) refers to the application of the engineering general contracting model in renewable energy projects, covering the entire process of services from design, procurement to construction. The general contractor is responsible for the overall planning, system design, equipment selection and procurement, construction, installation and commissioning of the project until the project is completed and connected to the grid, providing the owner with a 'turnkey' engineering solution. In the field of renewable energy, the EPC model ensures the efficient implementation of the project, improves energy output efficiency, and promotes the large-scale application of renewable energy by integrating design, procurement, construction and other links.
