The rental transparent LED display is an innovative display device that combines high transparency with flexible rental services. Its core feature is the use of hollow design or micro-LED technology, which enables dynamic content display while maintaining a 50%-90% transparency rate. It does not affect the lighting and visual transparency of the building, and can enhance the sense of technology and commercial value of the space through multimedia content. When using the rental model, users do not need to bear the cost of equipment procurement and maintenance. They can flexibly choose the screen size, resolution and special-shaped splicing solutions according to their needs, and enjoy the rapid installation, debugging and content adaptation services of a professional team. Technically, the product usually has high brightness, wide viewing angle, low power consumption and modular structure, supports seamless splicing and remote control, and can still maintain stable operation in complex environments. Some high-end models are also equipped with energy-saving cooling systems and waterproof functions, taking into account environmental protection and outdoor adaptability. With customized creative content, it can create an immersive visual experience that combines virtuality and reality for various scenes.
