## **Abstracts**

According to our (Global Info Research) latest study, the global Repeater Compass market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Repeater compass is an instrument used for navigation to display the heading information from a primary compass system in a secondary or remote location. It is typically used in multi-station setups where the primary compass is located in one area, such as the bridge of a ship or the cockpit of an aircraft, and the repeater compass is placed elsewhere for easy viewing by multiple users, such as crew members or passengers.

The repeater compass receives the heading information from the primary compass system and accurately displays it on its own compass card or display unit. It allows users in different areas of the vessel or aircraft to monitor the heading simultaneously without relying solely on the primary compass's visibility. Repeater compasses are typically installed on various parts of the ship or aircraft, such as the chartroom, crew cabins, or passenger lounges, providing convenient access to heading information for navigation and situational awareness purposes.
