## Abstracts

According to our (Global Info Research) latest study, the global Reprocessed Medical Device market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Reprocessed of medical devices refers to the process of inspecting, cleaning, testing, sterilizing and packaging of used and expired medical devices, such that the devices remain effective and safe for suitable clinical application.

Single use devices (SUDs) that have already been used are proposed to redefine as waste material. Manufacturers reprocess used SUDs to produce new medical devices to make them available for use. For the user, this has the advantage that no matter whether they use a new device from an original manufacturer or a renewed device from the reprocessor, the safety of the device is guaranteed.

The following companies are the key players in the United State reprocessed medical device market: Stryker Sustainability Solutions, Sterilmed, Medline ReNewal, Hygia and ReNu Medical. Stryker Sustainability Solutions is the United State leader, holding 39% production market share.
