## Abstracts

According to our (Global Info Research) latest study, the global Reritinib Mesylate Tablets market size was valued at US\$ 36.01 million in 2025 and is forecast to a readjusted size of US\$ 122 million by 2032 with a CAGR of 6.7% during review period.

Reritinib Mesylate Tablets are a highly selective oral epidermal growth factor receptor (EGFR) tyrosine kinase inhibitor, with reritinib mesylate as the main ingredient. This drug can irreversibly inhibit EGFR sensitive mutations and T790M resistance mutations, block downstream signaling pathway transmission, inhibit tumor cell proliferation, invasion and metastasis, and exert antitumor effects. Clinically, it is mainly used for locally advanced or metastatic non-small cell lung cancer with EGFR T790M mutation-positive after progression on EGFR tyrosine kinase inhibitor therapy. Characterized by high targeting, convenient oral administration, controllable drug resistance and favorable safety profile, it is an important second-line targeted therapeutic drug for advanced non-small cell lung cancer. In 2025, global Reritinib Mesylate Tablet production reached approximately 120,000 units.

As a domestic third-generation EGFR-TKI, Reritinib Mesylate Tablets are an important innovative product in China's lung cancer targeted therapy market. Relying on its unique molecular structure and excellent clinical efficacy, it has a differentiated advantage in the domestic competitive landscape of third-generation EGFR-TKIs. The drug is approved for non-small cell lung cancer positive for EGFR-sensitive mutations and T790M resistance mutations, with outstanding clinical efficacy and safety. It has also been included in the national medical insurance catalogue, significantly improving patients' medication accessibility. With the implementation of medical insurance coverage for first-line indications and the upgrading of clinical guideline

recommendations, its market penetration continues to rise, forming unique competitiveness among similar domestic drugs. In the future, with the advancement of combination therapy research, indication expansion, and optimization of medical insurance policies, Reritinib Mesylate Tablets will further consolidate its market position, promote a higher level of import substitution of domestic EGFR-targeted drugs, and support the high-quality development of China's precision lung cancer therapy market.
